Installation of IP Cameras connected over wireless point-to-point links.

EMPIRE INSTALLS WIRELESS SURVEILLANCE SYSTEM FOR GATED COMMUNITY

CHALLENGE

The Waterbrook Apartment Community was in need of a security solution on a budget to maintain the safety of the families living throughout their complex. Waterbrook community offers a club house, fitness center, kids play area and many other amenities that were in need of surveillance coverage.

SOLUTION

The technicians at Empire installed a wireless surveillance system in Rancho Cucamonga, CA for the Waterbrook Gated Community. Traditionally for buildings that are not physically connected like this location, surveillance camera cabling would require a conduit trench which is very expensive and does require longer install time.

Empire was able to save the customer money by installing Wireless Point-to -Point links. That allowed for Cameras to cover different locations of the community. The cameras were networked and provided easy access to all staff and management at Waterbrook for live view and playback.

Waterbrook now has a reliable security system for the safety of the families that live throughout the community.

Empire Technologies provides a variety of security solutions for your business including Video Surveillance, Access Control, Burglar Alarm Systems, Construction Site Security and Perimeter Intruder Detection Services. Contact us for more information.
