

AT&T EXPEDITES  
LARGE FIBER  
JOB EMPIRE  
GETS IT DONE IN  
JUST 5 DAYS

# EMPIRE INSTALLS LARGE CABLING JOB FOR AT&T DATA CENTER

## CHALLENGE

AT&T was looking to install a large amount of fiber to connect to their customers between two different floors of the data center. Part of the scope was to install 288 single mode fiber strands from the 3rd floor to 8th floor of the building.

AT&T uses Fiber cable for transmission of data over greater distances with higher bandwidths rather than simple copper cable.

## SOLUTION

Empire Technologies installs high bandwidth fiber solution in San Jose, CA for the AT&T Data Center.

The project was expedited by AT&T and needed to be completed as soon as possible. Empire Technologies was able to fly a crew up to the San Jose Data Center and complete the installation in just 5 Days.

AT&T now has a reliable connection to multiple customers within the data center utilizing the new fiber cables installed.

Empire Technologies provides a variety of Fiber Optic Cable installations and services including Multi Mode and Single Mode Fiber installation, inter-building and intra-building backbone fiber, IDF Fiber, Fiber splicing and Certification testing. Please contact us for more information.
