

San Bernardino based Women's Non-Profit utilized ETG's Low Voltage Services to complete the training center before the deadline.

Pedro Estrada Business Development Manager
Empire Technologies Group Inc.

"We have been providing Cloud based Access Control Systems for 7 years and has worked closely with many non-profits in the past. It's important to support non-profits as they play an important role in empowering communities and making a positive impact on people's lives. Offering a special Non-Profit discount is a great way to contribute to the non-profit sector and help them achieve their goals. Technology is a crucial part of many non-profit operations, so it's important for them to have access to affordable and reliable technology solutions."

CHALLENGE

The women's non-profit organization based in Southern California had a requirement to restrict and allow multiple people at various locations based on their criteria as they moved into a new facility for training their members. They were looking for a vendor who could provide a one-stop solution for all their technology needs within a tight deadline and budget. To meet their requirements, the organization considered various technology solutions that could provide access control and allow them to manage their member's access, as their old technology provider didn't provide access control solutions.

SOLUTIONS

Cloud Based Access Control System- Empire took a comprehensive approach to develop a new cloud-based access control system. By starting with a thorough discovery process, Empire was able to gain a deep understanding of the client's objectives and needs. Based on that understanding, Empire designed and engineered a solution that met the client's needs for flexibility and accessibility. By creating a cloud-based system, they gave the client the ability to change user access easily and remotely, which was a major advantage over traditional access control systems.

One Stop Shop - As ETG offers wireless systems, network cabling, and UPS installation services along with other services, it could serve as a one-stop-shop.

RESULT

ETG implemented a cloud-based access control system to ensure the security of confidential documents and data. This allowed the customer's team to focus on their core responsibilities without worrying about unauthorized access to sensitive information. The fact that the system was user-friendly and seamless was a huge plus, as it made it easier for everyone to adapt to the new protocols. Additionally, the fact that the installation was completed within the tight deadline and budget was a testament to the expertise of the team responsible for the project.
